Supplementary Figure 2. High magnification views of GATA4 immunostaining in testis. A) A Gata4\textsuperscript{flx/flx};Gata6\textsuperscript{flx/flx} mouse was subjected to sham surgery. After 3 days, tissue was harvested, fixed in PFA, and subjected to GATA4 immunostaining. Nuclear immunoreactivity was evident in Leydig cells, Sertoli cells, and peritubular cells. B) A Gata4\textsuperscript{flx/flx};Gata6\textsuperscript{flx/flx} mouse was injected with Ad-Cre-IRES-GFP. Six days later, tissue was harvested, fixed in PFA, and subjected to GATA4 immunostaining. Immunoreactivity was evident in pericytes and Sertoli cells. Abbreviations: lc, Leydig cell; pc, pericyte; pt, peritubular cell, sc, Sertoli cell. Scale bars = 20 µm.
